Disclaimers

This course was created for Autodesk Topobase 2009. The contents of this course are not intended for other versions of Autodesk Topobase.

We may make statements regarding planned or future development efforts for our existing or new products and services. These statements are not intended to be a promise or guarantee of future delivery of products, services or features but merely reflect our current plans, which may change. Purchasing decisions should not be made based upon reliance on these statements.

The Company assumes no obligation to update these forward-looking statements to reflect events that occur or circumstances that exist or change after the date on which they were made.

Chapter Overview

- This chapter focuses on:
 - Digitizing new data.
 - Creating existing data from an AutoCAD dwg file.
 - Editing attributes and geometry.
 - Filtering records in feature class forms.

Create New Data

Chapter Objectives

By the end of this chapter, you will be able to:

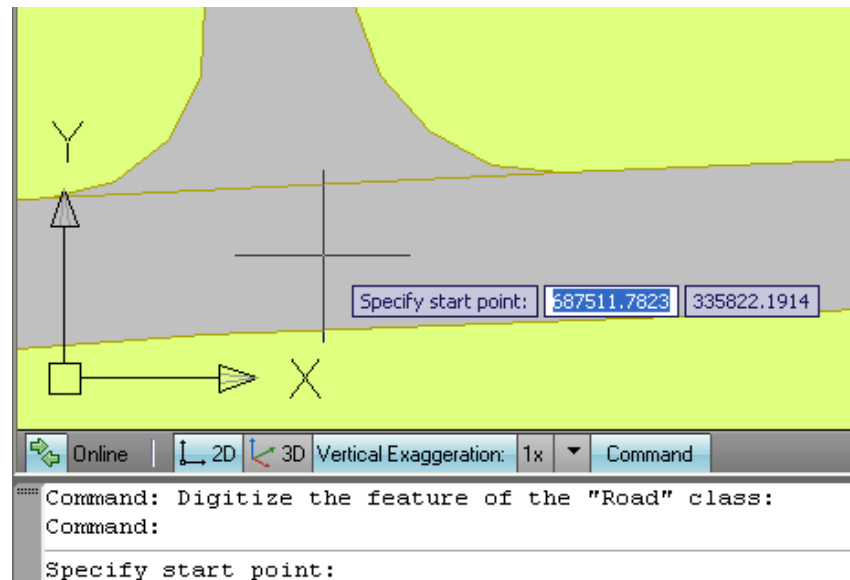

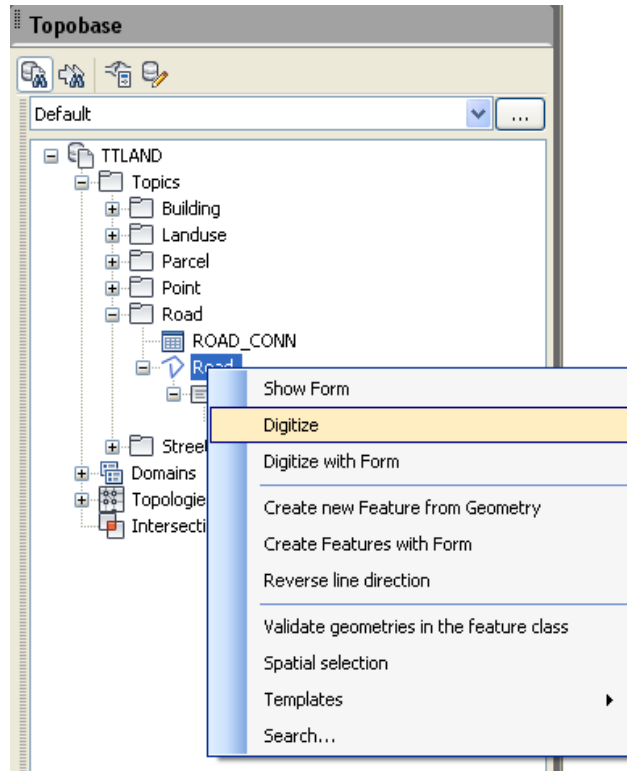

- Create new data by digitizing.
- Create new data from AutoCAD entities.
- Filter data.
- Edit existing geometries and attributes.

3.2 Creating Objects

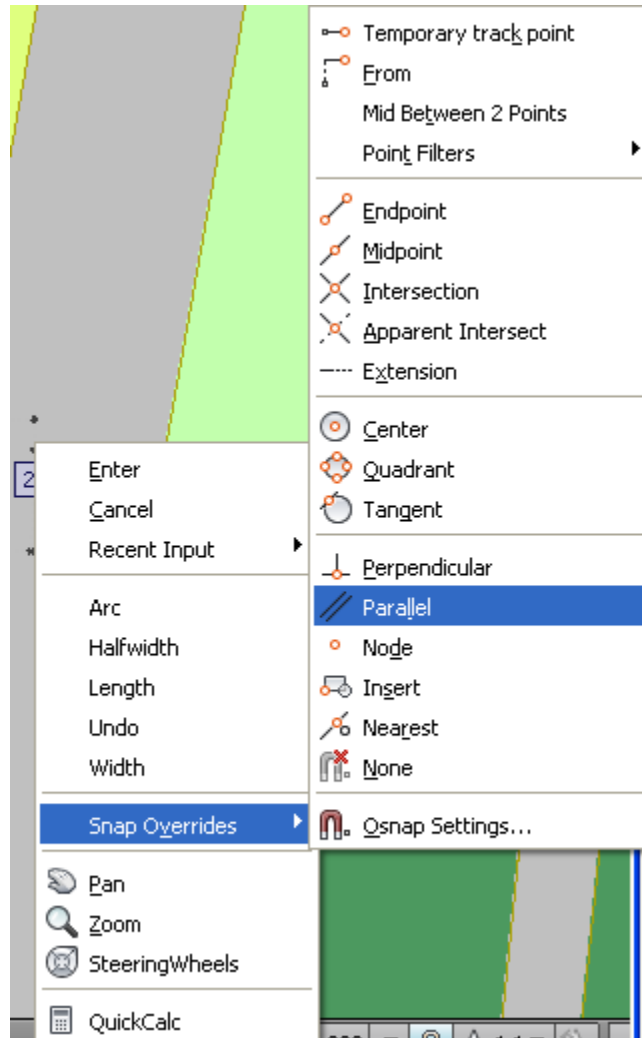

- Create new features in existing feature classes by using the Autodesk Topobase 2009 digitizing functionality.
- Bring native entities stored in AutoCAD drawings into a Topobase workspace and edit their geometry.

3.3 Digitizing New Geometry

- Create new polygon features (and new point and line geometries) in a workspace.
- *Digitize* lets you create a new feature *without* assigning attributes.

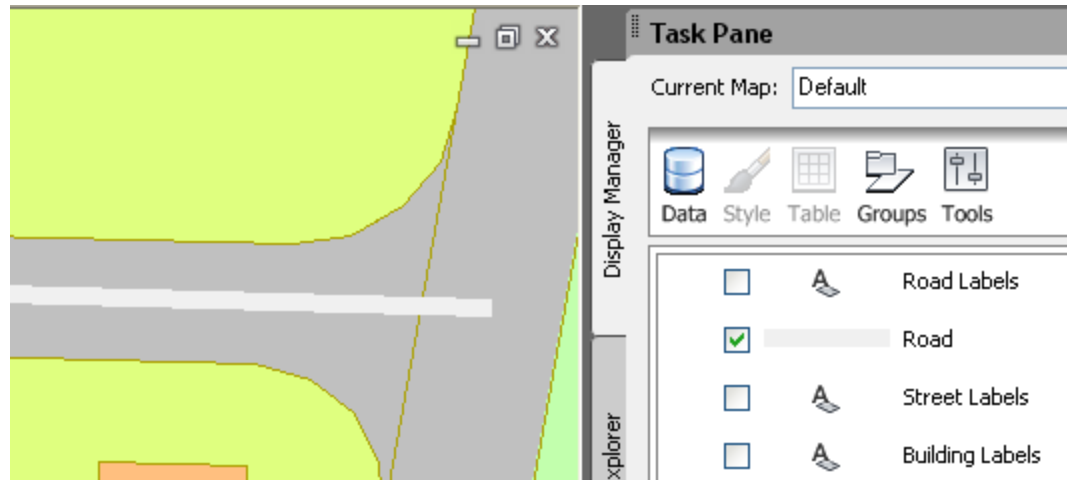

3.3.1 Feature Digitizing Shortcuts

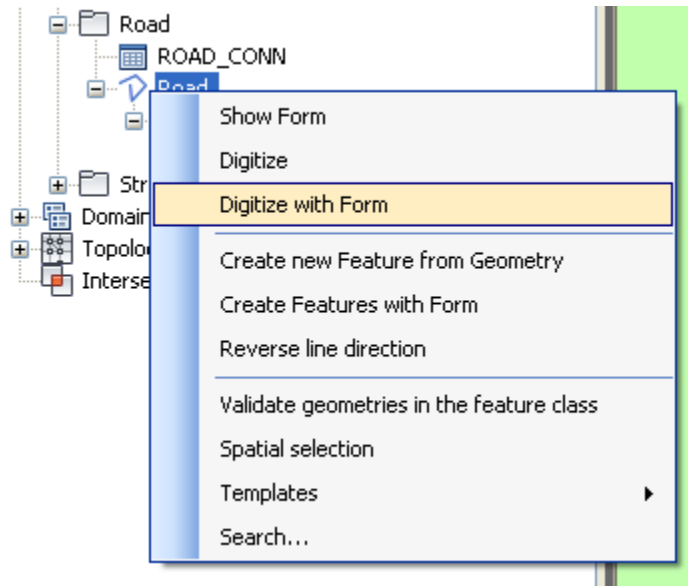

3.3.1 Feature Digitizing Shortcuts +

- After you finish digitizing the line feature by creating an endpoint, select **Enter** and the new feature is added to the selected Topobase feature class.
- If the feature class where you added the new feature is toggled on in the Map 3D Display Manager, the new line feature appears in the Map 3D drawing area.

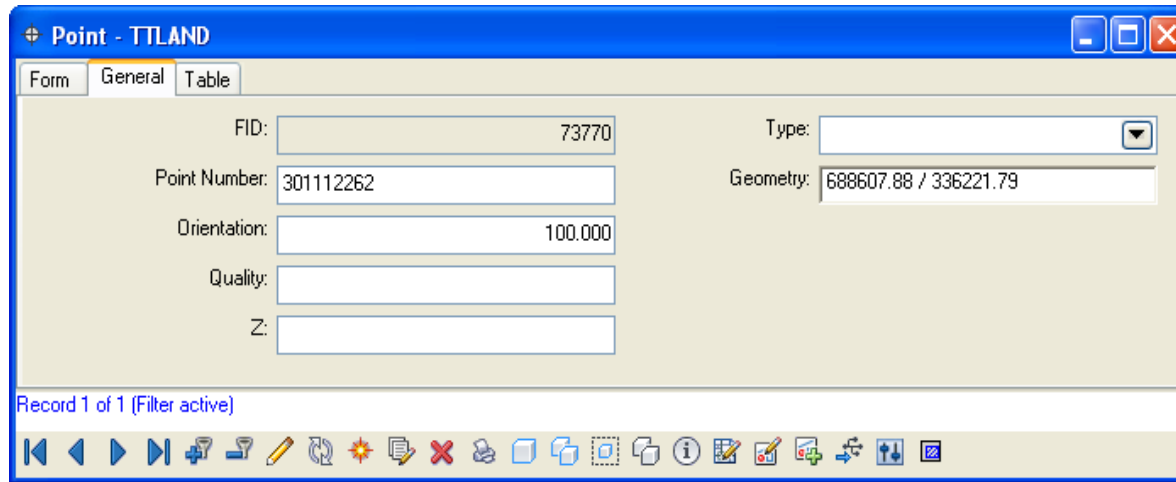

3.3.2 Assigning Attributes to a Feature

- Select **Digitize with Form**.

- After digitizing, use the feature class form to supply attribute information.

3.3.3 Digitizing Tools in the Feature Class Form

Point - TTLAND

Form General Table

FID: 73770 Type: [dropdown]

Point Number: 301112262 Geometry: 688607.88 / 336221.79

Orientation: 100.000

Quality: [text box]

Z: [text box]

Record 1 of 1 (Filter active)

Toolbar: [Navigation and Digitizing Tools]

Digitize new feature and select in form.

Digitize new geometry for selected feature.

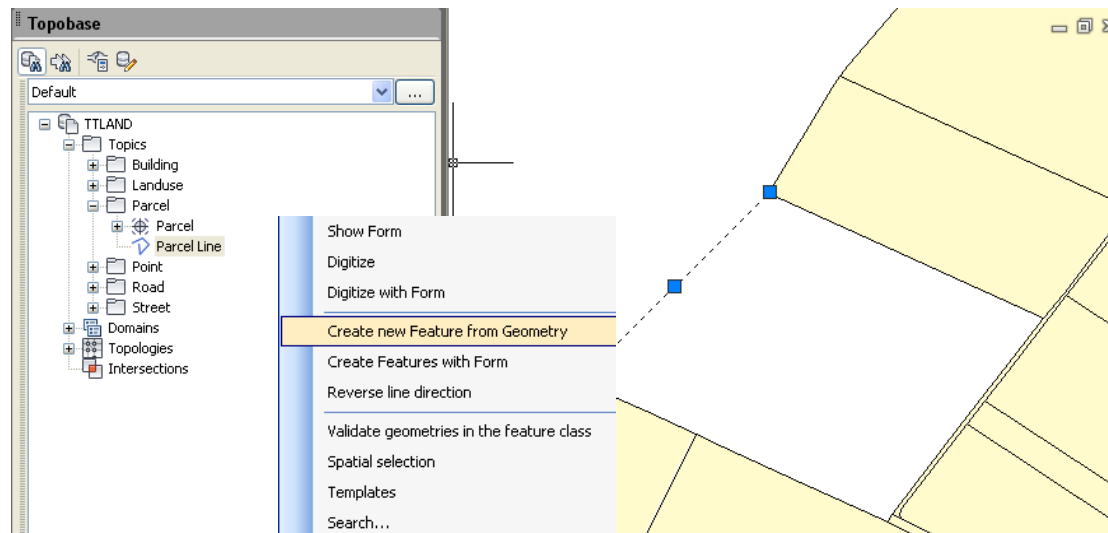

Connect existing geometry to selected feature.

Create and position label.

3.4 Importing Native Entities

- Native entity = Object that exists in an AutoCAD drawing.
- Import multiple native entities from Autodesk Map 3D into a feature class.
- Use:
 - **Create new Feature from Geometry.**
 - **Create Features with Form.**

3.5 Queries

- Spatial query:
 - Based on location information.
 - Based on position or spatial relationships.
- Attribute query:
 - Based on attributes in feature classes.
 - Example: “Select all garden areas”
 - Select all the features in the Landuse feature class for which the Landuse Type attribute has a value of garden.

3.5.1 SQL

- Use SQL (Structured Query Language) statements to query, insert, update, and delete data in the database.
- Use the **SELECT** statement to retrieve records from the database.
Basic syntax:

```
SELECT <attributes>  
FROM <table_name>  
WHERE <conditions>
```

NOTE: <conditions> filter the records selected.

- The SQL query function resides in feature class forms.

3.5.1 SQL +

- Operators

Operator	Meaning
<	is (strictly) less than
<=	is less than or equal to; is not greater than
>	is (strictly) greater than
>=	is greater than or equal to; is not less than
<>	is distinct from; is unequal to
AND, OR, NOT	Boolean operators
IS NULL	for blank field searching, database NULL
IS NOT NULL	for non-blank field searching
LIKE	for comparison with character strings
BETWEEN	strictly between, for range of values
IN	to use in a list of specific values

- Example:

```
SELECT * FROM LANDUSE_TSUR WHERE AREA > 40000
```

3.5.2 Form Filters

- Queries do not require extensive SQL knowledge.
- To use a form filter, open the form of the feature class.
- In the document explorer, right-click the feature class and select **Show Form** to access the **Form** tab and the **Table** tab.

The screenshot shows a software window titled "Landuse Surface - TTLAND". It has two tabs: "Form" (selected) and "Table". The "Form" tab contains several input fields with their respective values:

Field	Value
FID:	86799
Area:	41946.10122681
Landuse Centroid:	...
state:	0
area nominal:	41946.00000000
exact area:	41946.10127649

Below the form fields, it says "Record 1 of 2435". At the bottom is a toolbar with various icons for navigation and editing.

3.5.2 Form Filters +

- Add Filter tool.

- Simple filter
- Additive filter
- Or filter

- Construct queries by entering conditions using operators.

- Oracle is case-sensitive

Landuse Surface - TTLAND

Form Table

FID: state:

Area: area nominal:

Landuse Centroid: > exact area:

Filter Mode Simple Filter

Filter Cancel

- Example:

To perform a Simple filter query that returns polygons whose areas are greater than 40000 m², in the Area field introduce the condition **> 40000**.

3.5.2 Form Filters ++

- Add Filter tool 
 - Select **Additive Filter** from the shortcut menu in the status line. Type > **88250** in the Fid field, and click **Filter**.
- To remove the filter, click the **Remove Filter** tool in the toolbar at the bottom of the form. 

3.5.3 Filter Manager

- **SQL Filter**

- Right-click the feature class form and select **Filter > SQL Filter**.
- Accept the default, modify it, enter a new condition, or remove the filter.

- **Filter Manager**

- Lets you save, share, modify, reuse, and remove filters.
- Right-click the feature class form and select **Filter > Filter Manager**.

3.5.3 Filter Manager +

- To execute a named query:
 - Right-click the feature class form and select **Filter > Execute Filter**.
- To modify the filter:
 - Click **Cancel**, reopen the Filter Manager form, and click **Modify**.

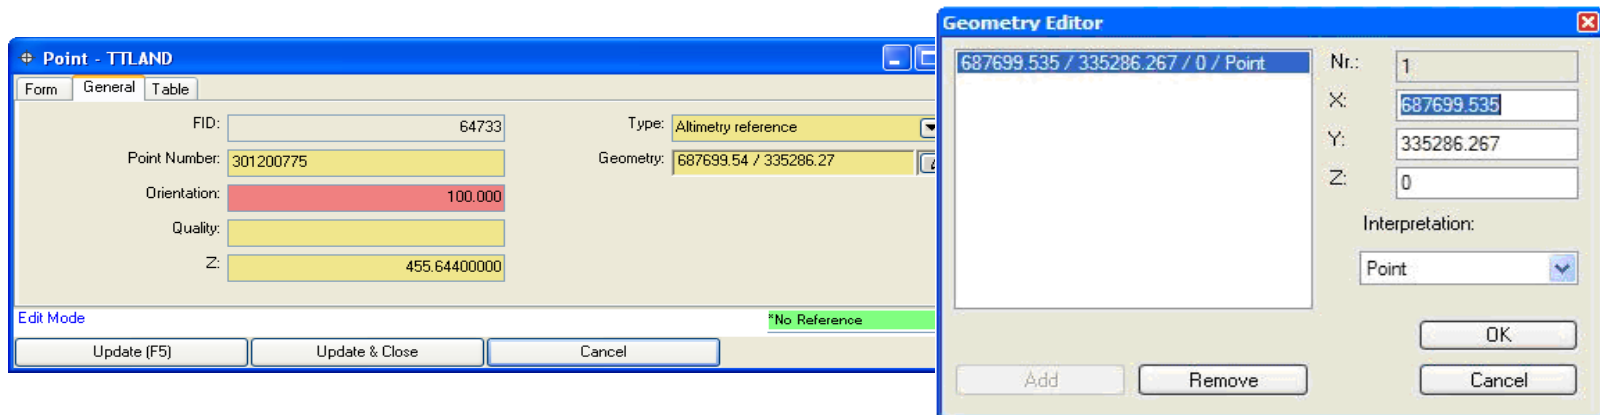

3.6 Modifying Objects

- Attribute data is modified using feature class forms.
- Use *Edit Mode*.

3.6.1 Editing Geometry

- Moving features in a feature class form:

- Moving features in AutoCAD Map 3D 2008:
 - Click **Edit Geometries** () in the Home tab, Quick Access panel.

3.6.2 Editing Attributes

- Individual updates
 - Click the Information icon, enter the update, and then click **Update**.
- Global updates
 - Click the Global Update tool, enter the update, and then click **Global Update**.

3.7 Chapter Summary

You should now be able to:

- Create new data by digitizing.
- Create new data from AutoCAD entities.
- Filter data.
- Edit existing geometries and attributes.
